Objective

To obtain a software engineering role in a data-driven organization where I can apply my machine learning, data analysis, and problem-solving skills to develop impactful solutions.

Summary

Software Engineer with a specialization in Artificial Intelligence and Machine Learning. Strong foundation in Python and hands-on experience implementing core ML algorithms such as Linear Regression, Logistic Regression, Support Vector Machines, Lasso, and Ridge. Proficient in data preprocessing, model training, evaluation, and visualization using tools like NumPy, Pandas, Matplotlib, Seaborn, and scikit-learn. Passionate about building intelligent systems to solve real-world problems with a focus on efficiency and accuracy.

Education

B.Tech in Computer Science and Engineering (AI/ML)

Khwaja Moinuddin Chishti Language University

September 2022 – July 2025 (COMPLETED)

Final Year Project: LLM using Generative AI

Diploma in Computer Science and Engineering

Government Polytechnic Bighapur, Unnao

August 2019 – July 2022

Final Year Project: Doctor's Appointment Website

Technical Skills

Programming: Python, HTML, CSS, JavaScript (Basic) ML Algorithms: Linear Regression, Logistic Regression, Deep Learning, computer vision, Support Vector Machine, Lasso, Ridge, Naive Bayes Libraries & Tools: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TF-IDF, Cosine Similarity Version Control: Git, GitHub

Internship Experience

Machine Learning Intern – Rinex.ai

- Worked on supervised learning algorithms including Linear and Lasso Regression.
- Implemented and evaluated machine learning models using real-world datasets.
- Enhanced practical skills in model evaluation, feature extraction, and error analysis using Python-based tools.

Projects

- Diabetes Prediction Model
- Spam Mail Prediction Model
- House Price Prediction Model
- Heart Disease Prediction Model
- Movie Recommendation System
- Resume selector
- Face expression detection

Movie Recommendation System

- Built a content-based recommender using metadata such as genres, cast, director, and keywords.
- Vectorized combined features using TF-IDF and computed cosine similarity for personalized recommendations.
- Implemented fuzzy matching with difflib for handling user inputs and enhanced recommendation accuracy.
- Tools Used: Python, Pandas, scikit-learn, TF-IDF, Cosine Similarity

Resume selector System

- Developed an intelligent resume filtering system that matches candidate resumes with job descriptions using content-based similarity.
- Vectorized resumes and job descriptions with TF-IDF and applied cosine similarity to rank candidates based on relevance.
- Implemented automated text preprocessing (tokenization, stopword removal, normalization) to enhance accuracy and efficiency.
- Tools Used: Python, Pandas, scikit-learn, TF-IDF, Cosine Similarity

Face Expression Detection System

- Built a deep learning model to detect and classify human facial expressions into categories such as happy, sad, angry, and neutral.
- Preprocessed facial images using OpenCV and augmented data to improve model generalization and robustness.
- Designed and trained a CNN-based architecture with high accuracy in real-time expression recognition.
- Tools Used: Python, TensorFlow/Keras, OpenCV, NumPy, Deep Learning (CNNs)
